

# GiNconf

## Everything in Sight with GiNconf

The G.i.N. configuration program (GiNconf) is a user interface for configuring and reading out of all G.i.N. data loggers.

The program offers extensive setting options thanks to LTL (Log Task Language). You can solve complex tasks with the help of custom configurations. This user friendly as well as powerful tool allows the user to plan any individual requirements and comfortably realise your data logger measuring projects.

GiNconf allows you to keep an eye on everything. You can readout your successfully recorded measuring data and convert it to a format of your choice for further analysis.
