

LogGraph is a convenient utility for displaying, organising and efficiently assessing recorded measurement data. This tool makes it easy to correlate measurement data, signals, positions and audio-visual descriptions. It is typically used to evaluate signals for vehicle speed, engine speed, and the vehicle electrical system voltage.

Display of arbitrary signals as graph (e.g. speed)

Adjustment of the graphical style of the data display

Setting of the scales of time and values for each signal

Measuring of the value and the time at a specific point

Creation of a report on the basis of the log file and the printing of the report
