

LogGraph is a comfortable tool to display, manage and efficiently evaluate recorded test results. The tool enables easy classification of measurement data, signals, positions and audio-visual descriptions. Typical signals are speed, engine speed and vehicle battery voltage.

Display of the remaining signals as graphs in their own windows, in the main window or in tabs

Adjustment of the graphical style of the data display

Setting of the scales of time and values

Measuring of the value and the time at a specific point

Measuring of the value difference and the time interval between two specific points

Creation of a report on the basis of the log file and the printing of the report
