

MLtools is included in the delivery of the GL2000/GL3000/GL4000/GL5300 series and GL2400 and enables you to generate vehicles (as well as specify the installed data logger), adjust network settings and to conduct the data transmission via LAN/ WiFi or modem. Optionally, the software package MLcenter (management software, requires a license) is available, which already contains MLmonitor and a synchronization tool.

Generate and manage vehicles

Defining of the vehicle specific data post processing (data conversion)

Integration of additional data processing programs

Configuration of network settings as well as long-distance data transmission
